The cell (from the Latin word 'cellula' meaning "small room") is the basic structural and functional unit of life forms. Every cell consists of a cytoplasm enclosed within a membrane, which contains many biomolecules such as proteins and nucleic acids.. Cells can acquire specified function and carry out various tasks within the cell such as replication, DNA repair, protein synthesis, and motility.

The concept of stress. The concept of stress undoubtedly owes to the works of Hans Selye, who is the father of stress research []. In the biological field, he has defined the stress as a nonspecific and predictable response of the body to any demand []. Actually, stress experience includes psychological and physical components, and it depends on the person perception of its controllability and ...
