### Solutions Of Steps In Commutative

An operation is commutative if a change in the order of the numbers does not change the results. This means the numbers can be swapped. Numbers can be added in any order. For example:  $4 + 5 = 5 + 4$   $x + y = y + x$ . Numbers can be multiplied in any order. For example:  $5 \times 3 = 3 \times 5$   $a \times b = b \times a$ . Numbers that are subtracted are NOT commutative. For example:
